

In the Specification

Please replace page 9, lines 7-11 with the following:

(15) A laminated film with a ~~density~~ specific gravity of 0.2 to 1.2, including at least two film layers, wherein at least one of the film layers contains a thermoplastic resin composition and is biaxially oriented and at least another one of the film layers contains a non-ductile resin composition.

Please replace page 32, lines 1-13 with the following:

It is critical that the second laminated film of the present invention has a ~~density~~ specific gravity of 0.2 to 1.2. Also, the first laminated film of the present invention preferably has such a ~~density~~ specific gravity. The laminated films of the present invention more preferably have a ~~density~~ specific gravity of 0.3 to 1.0 and further more preferably 0.4 to 0.7. When the laminated films have a ~~density~~ specific gravity of 1.2 or less, the films have a sufficient number of pours and therefore have good cushion properties; hence, the advantages of the present invention can be achieved. When the laminated films have a ~~density~~ specific gravity of 0.2 –
 ±-or more, the number of the pours in the films is not excessive; hence, the strength and dimensional stability of the films are well balanced.
